

NEELAKSH BHATIA

neelakshbhatia@gmail.com - github.com/vrMars - 408-680-9961

SKILLS

- **Languages:** Java, C++, Python, SQL, Scala, Javascript/Typescript, Swift
- **Tools/Technologies:** GCP, Node, Apache Beam, GraphQL, Docker, Kubernetes, MySQL, Git, Bash

EXPERIENCE

YouTube

Software Engineer L4, YouTube Shopping Merchant Team

San Bruno, CA
Jan 2024 - Present

- Spearheaded the development of a scalable, international billing infrastructure for YouTube Shopping merchants across multiple regions, resulting in a **\$1X Million** GMV uplift.
- Engineered enhanced traceability into YouTube Shopping's financial pipelines, implementing comprehensive reconciliation mechanisms to track every dollar across international merchant transactions, resulting in the recovery of **\$XXX thousand** in discrepancies.

Google

Software Engineer L4, Ads Infrastructure

Mountain View, CA
Jan 2024 - Aug 2024

- Led engineering efforts to support 3P Brand Safety Verification by designing and implementing PMax Transformer changes. This directly unblocked the migration of **\$500M+** in ARR for Display campaigns.
- Owned CM API and PMax Transformer efforts to add a "Device Hints" concept for PMax campaigns. This enhancement unlocked **\$100M+** in additional campaign spend from gaming customers and traffic aggregators.

Buying and Merchandising Platform

Aug 2022 - Dec 2023

- Maintained and enhanced the Tangle Authserver, providing critical cross-team support and resolving customer-facing issues.
- Led key infrastructure migrations including YouTube external auth integration (improving stability via CacheUtils migration) and 64-bit customer ID migration, ensuring code compliance and platform robustness.
- Designed and implemented an account linking flume for AMPS, supporting SA3, DCM, GAds, and DV3 accounts, independently managing the project from conception to execution and adhering to timelines.

Lacework

Software Engineer II

San Francisco, CA
Apr 2021 - Jul 2022

- Designed and implemented a highly-scalable, end-to-end ingestion pipeline to analyze security events and logs (scale of **80k events/sec** for the largest supported customer).
- Contributed to designing and building an Azure resource-management pipeline from the ground up, enabling **near real-time** compliance checks for customers.
- Created and ran a 'Get-Well Ingestion' program to improve our legacy ingestion pipeline's reliability, resulting in **20% fewer** SEV incidents over the duration of the initiative.
- Helped multiple engineering services switch to a Prometheus-based observability platform by migrating dashboards/alerts, holding tech talks and creating best-practice docs, saving the company **\$2 million+** in contract renewal costs.

Splunk

Software Engineering Intern

San Jose, CA
May 2019 - Aug 2019

- Designed and implemented a (patented) low-light QR code parsing framework that is used by **700k+ MAUs** using a self-trained CNN and ARKit, improving detection accuracy from **40% to 97%** in validation data sets.
- Developed functionality to view videos, images and PDFs in augmented reality while reducing CPU/GPU load by up to **22%** in the Splunk AR app.

PROJECTS

CamShare - Filetransfer using AR/ML - [Blog post](#)

Python - Swift

- Adhoc alternative for proximity based filesharing using augmented reality and machine learning models.
- Uses Wi-Fi for fast transfers with a focus on privacy (Uses common P2P encryption protocols).

EDUCATION

University of Waterloo

Bachelor of Computer Science (Honors)

Sep 2016 - Apr 2021
